‘Temperature, genetic and hydroperiod effects on metamorphosis of brown frogs *Rana arvalis* and *R. temporaria* in the field’, by J. Loman

On page 125 of the published version of this paper, Figure 14 is incorrect.

The correct Figure 14 is shown below:

Fig. 14. Effect of pond drying on time for metamorphosis of *Rana temporaria*. ‘Residual date for metamorphosis’ is the first date for metamorphosis of each episode, corrected for effects of pond and year and number of metamorphs found. ‘Pond area left’ is the area of water remaining in the first week of June, compared to that at the time of spawning in April. Truncated episodes were those where late tadpoles were killed as a result of the pond drying. Complete episodes were those where this never happened. Only episodes from ponds with both complete and truncated episodes are included in the figure.
